IN THE CLAIMS:

A complete listing of the claims is set forth below. Please amend the claims as follows:

1.   **(Canceled)**

2.   **(Currently Amended)** A computer-implemented method for reproducing a selection of selecting members in a hierarchy, the method performed using a computer system comprising one or more processing units and one or more memory units, the method comprising:

providing a member selection interface to a user, the member selection interface capable of providing the user with the ability to navigate through a hierarchy of members;

receiving input of a the user from a the member selection interface;

determining a sequence of one or more actions associated with a member selection tree, the actions collectively selecting one or more members from a the hierarchy of members, the hierarchy of members being associated with a particular dimension of an organization of data;

recording the sequence of actions of the user in a member selection script; script, the member selection script including a hierarchy selection command for determining the sequence of actions to be recorded; and

executing the recorded member selection script script, after the hierarchy of members has been modified, to reproduce the users original input to the member selection interface, to generate a new selection of members based upon the members and hierarchical relationships of the users original inputs from the member selection interface. inputs, after the hierarchy of members has been modified.

3. **(Previously Presented)** The method of Claim 2, wherein one or more of the actions comprise selecting the dimension from which members are to be selected, the dimension selected from the group consisting of a product dimension, a geography dimension, and a time dimension.

4. **(Previously Presented)** The method of Claim 2, wherein one or more of the actions comprise selecting the hierarchy from which members are to be selected.

5. **(Previously Presented)** The method of Claim 2, wherein one or more of the actions comprise selecting or deselecting one or more levels of the hierarchy from which members are to be selected, the members being selectable only from selected levels.

6. **(Previously Presented)** The method of Claim 2, wherein:

one or more of the actions comprise expanding a member to view the children of the member; and

the selection of an expanded member causing only the selection of the expanded member.

7. **(Previously Presented)** The method of Claim 2, wherein:

one or more of the actions comprise collapsing a member to hide the children of the member; and

the selection of a collapsed member causing the selection of the expanded member and the children of the expanded member.

8. **(Previously Presented)** The method of Claim 2, wherein one or more of the actions comprise selecting or deselecting one or more members from the hierarchy.

9.   **(Previously Presented)** The method of Claim 2, wherein the one or more actions are recorded in the member selection script using one or more commands, the commands and one or more parameters associated with each command identifying the one or more actions.

10.   **(Previously Presented)** The method of Claim 2, wherein the user manually generates the member selection script.

11.   **(Previously Presented)** The method of Claim 2, wherein the member selection script is automatically generated based on input received from the user using a member selection interface.

12.   **(Canceled)**

13.   **(Currently Amended)** A system for <u>reproducing a selection of</u> ~~selecting~~ members in a hierarchy, the system comprising one or more computer systems each comprising one or more processing units and one or more memory units collectively operable to:

<u>provide a member selection interface to a user, the member selection interface capable of providing the user with the ability to navigate through a hierarchy of members</u>;

receive input of ~~a~~ <u>the</u> user from ~~a~~ <u>the</u> member selection interface;

determine a sequence of one or more actions associated with a member selection tree, the actions collectively selecting one or more members from ~~a~~ <u>the</u> hierarchy of members, the hierarchy of members being associated with a particular dimension of an organization of data;

record the sequence of actions of the user in a member selection ~~script;~~ <u>script, the member selection script including a hierarchy selection command for determining the sequence of actions to be recorded;</u> and

execute the recorded member selection ~~script~~ <u>script, after the hierarchy of members has been modified, to reproduce the users original input to the member selection interface,</u> ~~to generate a new selection of members~~ based upon the members and hierarchical relationships of the users original <u>inputs from the member selection interface.</u> ~~inputs, after the hierarchy of members has been modified.~~

14.   **(Previously Presented)** The system of Claim 13, wherein one or more of the actions comprise selecting the dimension from which members are to be selected, the dimension selected from the group consisting of a product dimension, a geography dimension, and a time dimension.

15.   **(Previously Presented)** The system of Claim 13, wherein one or more of the actions comprise selecting the hierarchy from which members are to be selected.

16.   **(Previously Presented)** The system of Claim 13, wherein one or more of the actions comprise selecting or deselecting one or more levels of the hierarchy from which members are to be selected, the members being selectable only from selected levels.

17.   **(Previously Presented)** The system of Claim 13, wherein:

one or more of the actions comprise expanding a member to view the children of the member; and

the selection of an expanded member causing only the selection of the expanded member.

18.   **(Previously Presented)** The system of Claim 13, wherein:

one or more of the actions comprise collapsing a member to hide the children of the member; and

the selection of a collapsed member causing the selection of the expanded member and the children of the expanded member.

19.   **(Previously Presented)** The system of Claim 13, wherein one or more of the actions comprise selecting or deselecting one or more members from the hierarchy.

20.   **(Previously Presented)** The system of Claim 13, wherein the one or more actions are recorded in the member selection script using one or more commands, the commands and one or more parameters associated with each command identifying the one or more actions.

21.   **(Previously Presented)** The system of Claim 13, further operable to automatically generate the member selection script based on input received from the user using a member selection interface.

22.   **(Canceled)**

23.   **(Currently Amended)** Software for <u>reproducing a selection of</u> ~~selecting~~ members in a hierarchy, the software embodied in at least one computer-readable medium and, when executed on a computer system comprising one or more processing units and one or more memory units, operable to:

<u>provide a member selection interface to a user, the member selection interface capable of providing the user with the ability to navigate through a hierarchy of members;</u>

receive input of ~~a~~ <u>the</u> user from ~~a~~ <u>the</u> member selection interface;

determine a sequence of one or more actions associated with a member selection tree, the actions collectively selecting one or more members from ~~a~~ <u>the</u> hierarchy of members, the hierarchy of members being associated with a particular dimension of an organization of data;

record the sequence of actions of the user in a member selection ~~script;~~ <u>script, the member selection script including a hierarchy selection command for determining the sequence of actions to be recorded;</u> and

execute the recorded member selection ~~script~~ <u>script, after the hierarchy of members has been modified, to reproduce the users original input to the member selection interface,</u> ~~to generate a new selection of members~~ based upon the members and hierarchical relationships of the users original <u>inputs from the member selection interface.</u> ~~inputs, after the hierarchy of members has been modified.~~

24.   **(Previously Presented)** The software of Claim 23, wherein one or more of the actions comprise selecting the dimension from which members are to be selected, the dimension selected from the group consisting of a product dimension, a geography dimension, and a time dimension.

25.   **(Previously Presented)** The software of Claim 23, wherein one or more of the actions comprise selecting the hierarchy from which members are to be selected.

26.   **(Previously Presented)** The software of Claim 23, wherein one or more of the actions comprise selecting or deselecting one or more levels of the hierarchy from which members are to be selected, the members being selectable only from selected levels.

27.   **(Previously Presented)** The software of Claim 23, wherein:

one or more of the actions comprise expanding a member to view the children of the member; and

the selection of an expanded member causing only the selection of the expanded member.

28.   **(Previously Presented)** The software of Claim 23, wherein:

one or more of the actions comprise collapsing a member to hide the children of the member; and

the selection of a collapsed member causing the selection of the expanded member and the children of the expanded member.

29.   **(Previously Presented)** The software of Claim 23, wherein one or more of the actions comprise selecting or deselecting one or more members from the hierarchy.

30.   **(Previously Presented)** The software of Claim 23, wherein the one or more actions are recorded in the member selection script using one or more commands, the commands and one or more parameters associated with each command identifying the one or more actions.

31.   **(Previously Presented)** The software of Claim 23, further operable to automatically generate the member selection script based on input received from the user using a member selection interface.
